Clinical Nutrition (1996) **15**: 345–348
© Pearson Professional Ltd 1996

Subject index

Abbreviations; EN, enteral nutrition; GI, gastrointestinal, PN, parenteral nutrition; TPN, total parenteral nutrition

A

Abdominal radiation, ornithine α-ketoglutarate accelerates healing of small intestine and reduces bacterial translocation after, 29, 214
Acidity, titratable, importance to phlebitic potential of infusion solution, 129
Alanyl-glutamine preserves hepatic glutathione stores after 5-FU treatment, 259
Alimentary tract, *see* Gastrointestinal tract
Amino acids
  asparagine synthetase regulation mediated by, 327
  brain levels during glutamine supplementation, remote injury-induced changes, 149
  intragastric bolus feeding of meals containing free, compared with partially hydrolyzed or intact protein with respect to interorgan substrate flux in pig, 119
  muscle, during glutamine supplementation, *see* Glutamine
  parenteral solutions, hydrogen sulphide in, 34
Anorexia nervosa, fat-free mass measurement by bioelectrical impedance in prediction of energy expenditure in, 109
Antioxidants in coconut oil, 99
L-Arginine
  analogue, NO-independent inhibitory effects on IL-2 cytotoxic activity, 16
  GI immunity during TPN and effects of, 15
  metabolic effects on malignant tissues, 89
Asparagine synthetase, amino acid-dependent regulation, 327

B

Bacterial (microbial) translocation
  dietary fatty acids modulating, after blood transfusion and thermal injury, 291
  econutrition and health maintenance in prevention of, 1
  ornithine α-ketoglutarate reduces, after abdominal radiation, 29, 214
Bacteriocidal response, dietary fatty acids modulating, following blood transfusion and thermal injury, 291
Bioimpedance instruments
  fat-free mass measurement with, in prediction of energy expenditure in anorexia nervosa, 109
  multifrequency, Cole-Cole plots to compare two, 147
Blood transfusion and thermal injury, dietary fatty acids modulating bacteriocidal response/microbial translocation/host survival after, 291
Bone, turnover in home PN observed by biochemical markers, 157
Bone marrow transplantation, cyclic vs. continuous PN in, 332
Bowel, *see* Intestine
Brain amino acid changes due to remote injury during glutamine supplementation, 149
Burns, *see* Thermal injury

C

Calcidiol and calcitriol concentrations in the elderly varying with age/sex/season/disease, 201
Cancer
  metabolic effects of arginine on malignant tissue, 89
  TPN in, 207
Cannulas, ultrafine, venous access site rotation for peripheral PN employing, 311
Children after small bowel resection, GH as adjuvant in treatment of, 185
Cirrhosis, liver, GH effects on hepatic IGF-1 mRNA/plasma IGF-1/nitrogen excretion in gastrectomized rats with, 321
Coconut oil antioxidants, 99
Cole-Cole plots to compare two multi-frequency bioimpedance instruments, 147
Cyclic EN effects on immunological status of malnourished patients, 189
Cyclic PN in bone marrow transplantation, continuous vs., 332
Cytokines, circulating, postoperative, 75
Cytotoxic activity of IL-2, NO-independent inhibitory effects of N^G-monomethyl-L-arginine on, 16

D

Diarrhoea, enteral feeding-related, peptide YY in pathogenesis of, 307

E

Econutrition and health maintenance in prevention of GI inflammation/ulceration and sepsis, 1
EGF effects on intestinal uptake of glutamine during TPN, 21
Elderly
  calcidiol and calcitriol concentrations in, varying with age/sex/season/disease, 201
  orthopaedic surgery, nutritional status and clinical outcome of females after, 101
Endoscopically placed gastrostomy tubes, percutaneous, prospective randomized comparison of two different sized, 317
Endotoxaemic rats, ornithine α-ketoglutarate counteracting thymus involution and glutamine depletion in, 197
Energy expenditure in anorexia nervosa, fat-free mass measurement by bioelectrical impedance in prediction of, 109
Enteral nutrition
  cyclic, effects on immunological status of malnourished patients, 189
  glutamine in, effects on glutamine and leucine metabolism, 84
  hormonal response and pathogenesis of diarrhoea in, 307
  lung glutamine metabolism and effects of, 86
  nasogastric tubes, clinical evaluation of newly designed, 285
  optimal use, Swedish study, 171
Enteritis, radiation, ornithine α-ketoglutarate accelerates healing of small intestine and reduces bacterial translocation in, 29, 214

Epidermal growth factor effects on intestinal uptake of glutamine during TPN, 21
ESPEN members, report on questionnaire sent to, 279
ESPEN Research Fellow Symposia 1995, effect of enteral glutamine on glutamine and leucine metabolism, 84

F

Fasting, *see* Starvation
Fat (lipid) emulsions in TPN in rats
  fatty acid composition of, plasma and hepatic lipids and effects of varying, 24
  hepatic steatosis and effects of, 24, 80
  1,3-specific triglyceride-based, plasma protein interaction, 175
Fat-free mass measurement by bioelectrical impedance in prediction of energy expenditure in anorexia nervosa, 109
Fatty acids, dietary, bacteriocidal response/microbial translocation/host survival modulated by, following blood transfusion and thermal injury, 291
Fatty acids in fat emulsions, see Fat (lipid) emulsions
FDA safety alert, precipitation associated PN, 213
Female elderly surgical orthopaedic patients, nutritional status and clinical outcome, 101
Fish oil emulsions in rats receiving TPN, effects on hepatic steatosis of, 24, 800
5-Fluorouracil treatment, alanyl-glutamine preserves hepatic glutathione stores after, 259

G

Gastrectomized rats with liver cirrhosis, GH effects on hepatic IGF-1 mRNA/plasma IGF-1/nitrogen excretion in, 321
Gastrically-infused bolus meals of elementary/partially hydrolyzed/intact protein causing comparable changes in interorgan substrate flux in pig, 119
Gastrointestinal tract, *see also specific regions*
  failure (acute), long-term outcome and cost-effectiveness of PN in, 64
  GH preoperative administration with glutamine inducing postoperative shift from glucose to glutamine consumption in, 165
  immunity during TPN, arginine effects on, 115
  inflammation and ulceration, econutrition and health maintenance in prevention of, 1
Gastrostomy tubes, percutaneous endoscopically placed, prospective randomized comparison of two different sized, 317
Gene expression, example of nutrient control of, 327
General practice, prevalence of malnutrition, 60
Glucose
  consumption by GI tract, GH preoperative administration with glutamine inducing postoperative shift to glutamine consumption from, 165
  homeostasis in long-term home PN, 141
Glutamine, *see also* Alanyl-glutamine
  brain amino acid changes due to remote injury during supplementation with, 149
  in endotoxaemic rats, ornithine α-ketoglutarate counteracting depletion of, 197
  intestinal uptake/consumption
    epidermal growth factor effects on, during TPN, 21
    GH preoperatively administered with glutamine inducing postoperative shift from glucose consumption to, 165
  metabolism
    enteral glutamine and its effects on, 84
    lung, effects of starvation and PN/EN, 86
  muscle protein/amino acid metabolism during supplementation with
    pathological, 149
    postoperative, 265
Glutathione, hepatic, alanyl-glutamine administered in 5-FU treatment preserves, 259
Growth hormone administration
  hepatic IGF-1 mRNA/plasma IGF-1/nitrogen excretion in gastrectomized rats with liver cirrhosis and effects of, 321
  preoperative, with glutamine, inducing postoperative shift from glucose to glutamine consumption in GI tract, 165
  in small bowel resection, *see* Small bowel

H

Health maintenance and econutrition in prevention of GI inflammation/ulceration and sepsis, 1
Hepatology, *see* Liver
Home PN, *see* Parenteral nutrition
Hormones
  enteral nutrition-related responses, in pathogenesis of related diarrhoea, 307
  stress, postoperative circulating, 75
Hydrogen sulphide in parenteral amino acid solutions, 34
Hyperglycaemic patients receiving TPN, 11

I

IGF-1, hepatic mRNA and plasma, GH effects, in gastrectomized rats with liver cirrhosis, 321
Immunity
  cyclic EN in malnourished patients and effects on, 189
  GI, during TPN, arginine effects on, 115
  trace element supplements in burns and effects on, 94
Impedance, *see* Bioimpedance instruments
Inflammation, GI, econutrition and health maintenance in prevention of, 1
Injury, brain and muscle amino acid level changes due to remote, during glutamine supplementation, 149
Insulin, postoperative resistance to, 75
Insulin-like growth factor-1, hepatic mRNA and plasma, GH effects, in gastrectomized rats with liver cirrhosis, 321
Interleukin-2 cytotoxic activity, NO-independent inhibitory effects of N^G-monomethyl-L-arginine on, 16
Intestine/bowel
  glutamine uptake by, epidermal growth factor effects on, during TPN, 21
  ornithine α-ketoglutarate accelerates healing and reduces bacterial translocation in, after abdominal radiation, 29, 214
  small, *see* Small bowel
  transplantation, 45
Intravenous nutrition, *see* Parenteral nutrition

L

Lactose intake and lactase activity in multi-ethnic population, 297
Leucine metabolism
  enteral glutamine and its effects on, 84
  in fasted and TNF-treated rats, 91
Lipid(s)
  hepatic, effects of fat emulsions with different fatty acid composition in TPN on levels of, 24, 80
  plasma, effects of fat emulsions with different fatty acid composition in TPN on levels of, 24
Lipid emulsions, *see* Fat (lipid) emulsions
Liver
  cirrhosis, GH effects on hepatic IGF-1 mRNA/plasma IGF-1/nitrogen excretion in gastrectomized rats with, 321
  failure, acute, distribution of exogenous and endogenous carnitine in rats with, 133
  glutathione stores, alanyl-glutamine administered in 5-FU treatment preserves, 259
  lipids, effects in rats receiving TPN of different fat emulsions on, 24
  steatosis, effects in rats receiving TPN of different fat emulsions on, 24, 80
Lung glutamine metabolism, effects of starvation and PN/EN, 86

M

Malignancy, *see* Cancer
Malnutrition
  cyclic EN effects on immunological status in patients with, 189
  in general practice, prevalence, 60
Metabolic effects
  of arginine on malignant tissues, 89
  of trace element supplements in burns, 94
Microbial translocation, *see* Bacterial translocation
Milk intake and lactase activity in multi-ethnic population, 297
Mineral supplements in burns, trace, clinical/immune/metabolic effects of, 94
N^G-Monomethyl-L-arginine, NO-independent inhibitory effects on IL-2 cytotoxic activity, 16
Multi-frequency bioimpedance instruments, Cole-Cole plots to compare two, 147
Muscle protein/amino acid metabolism during glutamine supplementation, *see* Glutamine

N

Nasogastric enteral feeding tubes, clinical evaluation of newly designed, 285
Neoplasms, malignant, *see* Cancer
Nitric oxide-independent inhibitory effects of N^G-monomethyl-L-arginine on IL-2 cytotoxic activity, 16
Nitrogen excretion in gastrectomized rats with liver cirrhosis, GH effects on, 321

O

Ornithine α-ketoglutarate
  abdominal radiation and effects in small intestine of, 29, 214
  thymus involution and glutamine depletion counteracted by, in endotoxaemic rats, 197
Orthopaedic patients, elderly female surgical, nutritional status and clinical outcome, 101

P

Paediatric small bowel resection, GH as adjuvant in treatment following, 185
Parenteral nutrition (partial and total and predominantly intravenous)
  arginine effect on GI immunity during, 115
  in bone marrow transplantation, cyclic vs. continuous, 332
  in cancer, 207
  fat emulsions in, *see* Fat (lipid) emulsions
  in GI failure (acute), long-term outcome and cost-effectiveness, 64
  global quality assurance, 39
  glutamine and, *see* Glutamine
  home
    bone turnover in, observed by biochemical markers, 157
    glucose homeostasis in, long-term, 141
    multicentre European survey, 53, 339
  hydrogen sulphide in amino acid solutions, 34
  hyperglycaemic patients receiving, clinical management, 11
  peripheral
    phlebitic potential of infusion solution and importance of titratable acidity, 129
    as route of choice, two-year study, 69
    venous access site rotation employing ultrafine cannulas, 311
  precipitation associated with, FDA safety alert, 213
  small bowel resection and, *see* Small bowel
Peptide YY in pathogenesis of enteral feeding-related diarrhoea, 307
Percutaneous endoscopically placed gastrostomy tubes, prospective randomized comparison of two different sized, 317
Peripheral infusion, *see* Parenteral nutrition
pH, importance to phlebitic potential of infusion solution, 129
Phlebitis, experimental infusion, titrable acidity and its importance in, 129
Plasma
  IGF-1, in gastrectomized rats with liver cirrhosis, GH effects on, 321
  lipids, fat emulsions of different fatty acid composition and their effects in rats receiving TPN on, 24
  proteins, fat emulsions based on 1,3-specific triglycerides and their interactions with, 175
Postoperative problems, *see* Surgery
Precipitation associated PN, FDA safety alert, 213
Probiotic bacteria in prevention of GI inflammation/ulceration and sepsis, 1
Proteins
  intragastric bolus feeding of meals containing elementary/partially hydrolyzed/intact, causing comparable changes in interorgan substrate flux in pig, 119
  muscle, effects of glutamine infusion, *see* Glutamine
  plasma, fat emulsions based on 1,3-specific triglycerides and their interactions with, 175
Pulmonary glutamine metabolism, effects of starvation and PN/EN, 86

Q

Quality assurance in PN, global, 39

R

Radiation, abdominal, ornithine α-ketoglutarate accelerates healing of small intestine and reduces bacterial translocation after, 29, 214

S

Safflower oil emulsions in rats receiving TPN, effects on diet-induced hepatic steatosis of, 20, 80
Sepsis
  carnitine in rats with, distribution of exogenous and endogenous, 133
  econutrition and health maintenance in prevention of, 1
Small bowel
  lactase status/activity in multi-ethnic population, 297
  resection (and PN), GH administration in
    as adjuvant in treatment of child, 185
    intestinal structure and effects of recombinant preparations, 303
Starvation/fasting
  glutamine metabolism in lung and effects of, 86
  leucine metabolism and effects of, 91
Stomach, *see entries under* Gastr-
Stress hormones, circulating, postoperative, 75
Surgery
  artificial nutrition in elective adult, perioperative, 231, 233, 236, 240, 241, 248
    consensus statement, 223
  glutamine infusion and its effects on muscle protein metabolism after, 265
  insulin resistance and circulating stress hormones and cytokines after, 75
  orthopaedic, elderly females after, nutritional status and clinical outcome, 101
  rationale for nutritional support, 155
  small bowel, *see* Small bowel
Swedish hospital study of optimal use of EN, 171

T

Thermal injury
  fatty acids (dietary) modulating bactericidal response/microbial translocation/host survival after blood transfusion and, 291
  trace element supplements in, clinical/immune/metabolic effects of, 94
Thrombophlebitis, experimental infusion, titratable acidity and its importance in, 129
Thymus involution in endotoxaemic rats, ornithine α-ketoglutarate counteracting, 197
Trace element supplements in burns, clinical/immune/metabolic effects of, 94
Transplantation
  bone marrow, cyclic vs. continuous PN in, 332
  intestinal, 45
Trauma, brain and muscle amino acid level changes due to remote, during glutamine supplementation, 149
Triglycerides, 1,3-specific, plasma protein interactions with fat emulsions based on, 175
Tubes
  nasogastric enteral feeding, clinical evaluation of newly designed, 285
  percutaneous endoscopically placed gastrostomy, prospective randomized comparison of two different sized, 317
Tumour, malignant, *see* Cancer
Tumour necrosis factor, leucine metabolism and effects of, 91

U

Ulceration, GI, econutrition and health maintenance in prevention of, 1

V

Venous access site for peripheral PN, rotation employing ultrafine cannulas, 311

W

Water, intra-/extracellular, Cole model equation and prediction of, 147
Women, elderly surgical orthopaedic patients, nutritional status and clinical outcome, 101

Clinical Nutrition (1996) **15**: 349–350
